Power Tube Sprayer

Better coverage at higher speeds

Better coverage at higher speeds The Power Tube spraying system was designed to do a simple task, cover and wet.

The combination of pure brunt and droplet control allows you to get results from a multi-row sprayer that we just have not been able to achieve in the past.

All the air is created from a uniquely designed air delivery system which creates exactly 20x more air than a ducted sprayer, whilst also having the perfect balance between air and pressure.

Power Tube is aptly named due to the way the air is catapulted off the sidewall of the diffuser.

The air speeds achieved air mind blowing, as a result for the first time ever, we have too much air.

2000 to 5000ltr Poly Tanks available
Low/Medium/High Pressure Pumps available

4 wheel independent axle
Floatation tyres 150:400mm
2 point tracking hitch
Poly-tech coated frame and chassis
Hydraulic Flip Up Arms, Height adjustment
and hydraulic row width adjustment available

Food machinery oil
Auto rate controller available
Fitted with chemical induction ports
Chemical resistant hydraulic hose
German hydraulic filtration
